Skills

Languages: Python, C++, Java, C, C#, JavaScript

ML & AI: PyTorch, OpenCV, NumPy, Pandas, Scikit-learn, Transformers

Cloud & DevOps: AWS, Azure, PostgreSQL, Docker, Kubernetes, Linux

Frameworks & Tools: .NET, React, FastAPI, Git

Experience

PROMETHEUS GROUP

Software Engineer

Aug. 2024 - July 2025

- Implemented features and resolved defects across C# .NET and React services; refactored legacy components following Domain-Driven Design principles and collaborated with customers/product teams to clarify requirements
- Designed and built an automated testing framework integrated into CI/CD, enabling scalable API/UI test coverage and reducing sprint regression time by 40%; identified production issues early and delivered rapid hotfixes
- Guided junior developers and QA contributors on architecture, testing strategy, and code quality; contributed to sprint planning, demos, and retrospectives

FIDELITY INVESTMENTS

Software Engineer Intern

June 2023 - Aug. 2023

- Integrated Azure Messaging Service for real-time data pipelines; used Java ORM patterns to manage and persist large-scale employer 401(k) transactions, reducing processing latency by 34%
- Developed API endpoints for publishing/consuming financial data through Azure Service Bus; migrated codebase from Bitbucket to GitHub
- Architected a modular, multi-tier application in Maven + Spring Boot, improving maintainability and scalability for future teams

UNIVERSITY OF NORTH CAROLINA CHARLOTTE

Undergraduate Researcher

Jan. 2023 - Jan. 2024

- Specialized in high-performance data structures for dynamic graph workloads, implementing and optimizing functionality for Microsoft's learned index ALEX and the industry-leading STX B+ tree using C++
- Accelerated graph analysis algorithms, including PageRank and Breadth First Search, by implementing multithreaded reading for lookups and range queries, demonstrating up to 65% improvement in query time over baseline methods
- Conducted independent research leveraging the UNCC High Performance Computing Cluster, validating performance improvements on SNAP datasets and receiving mentorship within a top-tier parallel computing research program

FIDELITY INVESTMENTS

Software Engineer Intern

June 2022 - Aug. 2022

- Built REST API endpoints and AWS Lambda functions for the Fidelity Bloom fintech app, supporting 10,000+ daily users with 99.9% uptime
- Automated incentive-transaction processes using AWS CloudFormation to provision and manage infrastructure
- Identified and assisted in resolving a critical bug prior to public launch, collaborating with the lead development team to pinpoint the root cause; recognized for attention to detail and commitment to product quality
- Implemented CI/CD pipeline using Jenkins and UrbanCode Deploy, contributing to 3 major releases

Education

NORTH CAROLINA STATE UNIVERSITY

Master of Science in Computer Science; Concentration in Machine Learning, AI

Aug. 2025 - May 2027

Cumulative GPA: 3.78

UNIVERSITY OF NORTH CAROLINA at CHARLOTTE

Bachelor of Science in Computer Science; Concentration in Software Engineering

Honors: Magna Cum Laude, Chancellor's List

Aug. 2020 - May 2024

Cumulative GPA: 3.85
